

NICHOLAS RUFFIN

Manager, Data Engineering · Commercial Pharmacy Data & RWE
Ellisville, MO | nruffinsecure@gmail.com | [linkedin.com/in/nicholas-ruffin](https://www.linkedin.com/in/nicholas-ruffin)

PROFESSIONAL SUMMARY

Engineering leader for commercial pharmacy-data delivery on a 7-figure ARR monetization platform. Own nearly 40 live production data feeds to 30+ pharma manufacturer, RWE, and alt-data organizations, spanning 18 manufacturer copay assistance and voucher discount programs, clinical program feeds, and de-identified patient-level tokenized claims data licensed for analytics. Own the de-identification lifecycle end to end: identified pharmacy transactions in, de-identification and Expert Determination certification, patient-level tokenization, then delivery into the customer's own environment. Manage a team of data engineers and set the technical standard for how customers consume NCPDP pharmacy data. Previously Director, Full Stack Development, building out software and RPA teams and supporting four healthcare acquisitions reporting to the CIO. Twelve years of engineering across pharmacy, healthcare data, and enterprise systems.

AREAS OF FOCUS

Commercial & Delivery	Business development partnership on renewals and new business (technical delivery lens); contract-to-delivery execution; customer stakeholder communication; cross-product data sourcing alongside VP; proof-of-delivery evidence
Program Feeds	Manufacturer copay assistance & voucher discount programs, clinical program feeds, PBM and pharmacy-services partner feeds; DUA-governed operational delivery on latency, coverage, and reliability
Data Products	De-identified & patient-level tokenized pharmacy transaction data, Expert Determination, RWE feed productization, cross-source combined feeds, HIPAA compliance
Platform	Multi-cloud (AWS + Azure), multiple Snowflake accounts; Snowflake (Procs/Streams/Tasks), AWS (MWAA, S3, Lambda, Fargate, ECS, IAM), Apache Airflow, Terraform, GitHub Actions, Python, SQL, SFTP / S3 / Azure Blob delivery

EXPERIENCE

Manager, Data Engineering | RedSail Technologies

Feb 2025 – Present

Data engineering leadership within RedSail's data monetization organization; primary technical partner for RWE and manufacturer customer relationships.

- Own commercial data delivery to pharma manufacturers — nearly 40 live production feeds to 30+ organizations. Includes 18 manufacturer copay assistance and voucher discount programs plus clinical program and pharmacy-services partner feeds. A DUA-governed operational motion distinct from the analytics products, sold and held to latency, coverage, and reliability commitments.
- Lead engineering across three delivery motions: de-identified, patient-level tokenized claims feeds (AWS Fargate + ECS + Snowflake), identified PHI into customer-controlled AWS or Azure environments for customers running their own tokenization engines, and cross-source combined feeds joining multiple pharmacy systems.
- Run delivery across a multi-cloud estate (AWS and Azure, multiple Snowflake accounts) and am consolidating customer feeds onto a shared combined-feed pipeline, cutting per-customer tokenization cost and retiring legacy pipelines without interrupting delivery.
- Manage a team of data engineers, assigning end-to-end ownership of customer-facing feed migrations and cutovers, with code standards and deployment discipline (Airflow, Terraform, GitHub Actions) that remove single-person dependencies from customer delivery.
- Own the de-identification lifecycle end to end — identified pharmacy transactions in, de-identification and Expert Determination certification, patient-level tokenization, then delivery into the customer's own environment — and manage the tokenization vendor relationship.
- Set the technical standard for how customers consume NCPDP pharmacy data: join-key design, cross-source reconciliation, and file-format decisions across every customer integration, and the same technical framing on business development calls and contract reviews so commercial commitments match delivery reality.
- Partner with business development from technical review through delivery. Review draft contracts for delivery feasibility, scope and price historical backfills as line items on dataset sales, then execute commitments across engineering, customer stakeholders, and other RedSail product areas alongside our VP.
- Regulatory readiness & data governance: HIPAA compliance, Expert Determination coordination with third-party evaluators, proof-of-delivery audit trails, and provenance documentation for customer legal reviews.

Director, Full Stack Development | Nimble Solutions

Aug 2021 – Feb 2025

Reporting to the CIO, built out and managed the software and RPA engineering teams (US and offshore) plus a project manager, and later took on the data team, through the company's inorganic growth phase.

- Technical partner to the CIO on four healthcare acquisitions. Supported technical due diligence, TCO analysis, integration sequencing, and stack rationalization; traveled to Hyderabad to fold the acquired team into US operations.
- Designed and shipped a microservices .NET AR reimbursement work queue on an n-tiered architecture with full monitoring and observability, revenue-ordered and backed by historical AR aging, lifting rep throughput to 30+ claims/day per rep.
- Integrated 20+ practice management systems into a unified data warehouse via RPA-based extraction, Azure function apps, and custom API integrations through Availity and Waystar, making post-acquisition consolidation feasible without a rebuild per acquisition.
- Partnered with CIO, VP of Infrastructure, and CISO on technical strategy, vendor evaluations, and annual capex/opex planning; established CI/CD (60% deployment-time reduction) and 90%+ test coverage across US and offshore teams.

Senior Full Stack Developer | Core & Main

Jun 2017 – Aug 2021

- Developed enterprise data applications using C#/.NET and SQL, supporting 200+ concurrent corporate users across operations.

EDUCATION

Bachelor of Science, Computer Science

University of Phoenix
