

Nicholas Ruffin

Maryland Heights, MO | (843) 793-9770 | nruffinsecure@gmail.com

PROFESSIONAL SUMMARY

Senior Data Engineer with 12+ years of technology experience, including 5+ years leading high-scale data architecture and infrastructure initiatives. Expert in building enterprise data platforms processing 4.8B+ records, designing cloud-native Snowflake/AWS solutions, orchestrating pipelines with Apache Airflow, and automating infrastructure with Terraform. Deep background in HIPAA-compliant healthcare data systems, data tokenization, and warehouse architecture.

TECHNICAL SKILLS

Data Platforms: Snowflake (Stored Procedures, Tasks, Streams, Schema Design, Performance Tuning), SQL

Cloud: AWS (MWAA, S3, Lambda, EC2, IAM, CloudWatch, Glue)

Orchestration: Apache Airflow (DAG design, scheduling, monitoring, secrets management)

Infrastructure: Terraform (IaC), Docker, Git, GitHub Actions (CI/CD)

Languages: Python, SQL

Data Integration: Kafka, REST APIs, event-driven architectures

Compliance: HIPAA, PII/PHI data governance, Datavant tokenization

EXPERIENCE

Senior Clinical Data Engineer

RedSail Technologies — Spartanburg, SC (Remote) | February 2025 – Present

- Engineered data monetization platform generating \$7M+ annual recurring revenue by designing secure PII tokenization workflows using Snowflake and Datavant integration for pharmaceutical clients.
- Built pipelines processing 4.8B records with 3M+ transactions/hour across multiple Snowflake instances, maintaining HIPAA compliance for downstream data delivery.
- Built Python-based Airflow DAGs managing S3 data extraction, secrets/variables management, and orchestration across 50+ daily ETL workflows deployed via GitHub Actions.
- Designed and optimized Snowflake stored procedures, materialized views, and task orchestration, reducing query latency by 40%.
- Implemented pipeline monitoring and alerting using Snowflake tasks and Airflow metrics, achieving 99.5% uptime SLA.
- Managed infrastructure-as-code with Terraform for Snowflake resource provisioning and environment management.
- Designed scalable warehouse schemas across 15+ client specifications, balancing performance with evolving data requirements.

Lead Data Integration Developer

Nimble Solutions — Chesterfield, MO (Remote) | August 2021 – January 2025

- Managed 5+ engineers on data integration projects, establishing technical standards and mentoring on cloud infrastructure best practices.
- Engineered integration of 50+ healthcare data sources into unified data platform, designing API orchestration patterns for reliable enterprise data flow.
- Built AR analytics workflow processing 30+ claims per representative daily, with queue-based prioritization by revenue and historical lookback on AR aging.
- Built automated data ingestion pipelines for patient claims and reimbursement data via REST API integrations with Availity and WayStar clearinghouse platforms.

- Implemented CI/CD pipeline improvements reducing deployment time by 60% through automated testing and deployment automation.

Senior Full Stack Developer

Core & Main Corporate Office — St. Louis, MO | June 2017 – August 2021

- Developed enterprise data applications and reporting infrastructure using SQL, supporting 200+ concurrent users across corporate operations.

EDUCATION

Bachelor of Science, Information Technology

University of Phoenix
