

NICHOLAS RUFFIN

Manager, Data Engineering · Health Data & RWE

Ellisville, MO | nruffinsecure@gmail.com | [linkedin.com/in/nicholas-ruffin](https://www.linkedin.com/in/nicholas-ruffin)

PROFESSIONAL SUMMARY

Engineering leader for a pharmacy-data monetization platform serving enterprise RWE and pharma manufacturer customers across multiple delivery motions, including tokenized de-identified feeds, identified PHI delivered into customer-controlled cloud environments, and cross-source combined feeds joining multiple pharmacy systems. Also lead the operational partner-data feeds behind manufacturer copay and voucher programs, PBM partners, and pharmacy-services networks. Manage a team of data engineers. Durable differentiation: NCPDP-standard pharmacy-data fluency as the technical translator into customer engineering teams whose depth is claims, not pharmacy transactions. Previously Director, Full Stack Development, leading three functional engineering teams (software, data, RPA) through four healthcare acquisitions reporting to the CIO. Twelve years of engineering across pharmacy, healthcare data, and enterprise systems.

AREAS OF FOCUS

Commercial & Delivery	Close partnership with business development on renewals and new business (technical delivery lens); contract-to-delivery execution; customer stakeholder communication; cross-product data sourcing across RedSail alongside VP; audit & proof-of-delivery evidence
Data Products	De-identified & tokenized pharmacy transaction data, Expert Determination, RWE feed productization, cross-source combined feeds, HIPAA compliance
Platform	Snowflake (Procs/Streams/Tasks, multi-instance), AWS (MWAA, S3, Lambda, Fargate, ECS, IAM), Apache Airflow, Terraform, GitHub Actions, Python, SQL

EXPERIENCE

Manager, Data Engineering | RedSail Technologies

Feb 2025 – Present

Data engineering leadership within RedSail's data monetization organization. Lead engineering for the monetization platform and the operational partner-data feeds; primary technical partner for RWE and manufacturer customer relationships.

- **Manage a team of data engineers**, assigning end-to-end ownership of customer-facing feed migrations and cutovers, with code standards and deployment discipline (Airflow, Terraform, GitHub Actions) that remove single-person dependencies from customer delivery.
- **Lead engineering for a pharmacy-data monetization platform** serving enterprise RWE and pharma manufacturer customers across multiple delivery motions: **tokenized de-identified feeds** (AWS Fargate + ECS + Snowflake) for the RWE-aggregator segment, **identified PHI into customer-controlled cloud environments** for customers running their own tokenization engines, and **cross-source combined feeds** joining multiple pharmacy systems.
- **Driving a platform consolidation onto a shared combined-feed pipeline** to cut per-customer tokenization and processing cost, retiring redundant legacy pipelines while holding delivery continuity for every account on the platform.
- **Lead engineering for the operational partner-data feeds.** Manufacturer copay and voucher programs, PBM partners, and pharmacy-services networks. A distinct delivery motion (DUA-governed operational feeds) from the analytics-oriented monetization platform, sold on latency, coverage, and reliability.
- **Turned NCPDP-standard fluency into a technical differentiation.** Customers' engineering teams know claims but not pharmacy transactions. I serve as the embedded translator for their data teams on join-key design, cross-source reconciliation, and file-format questions, and provide the same technical framing on business development calls and contract reviews so commercial commitments match delivery reality.
- **Partner with business development on renewals and new business from technical review through delivery.** Sit in on new-business conversations, review draft contracts for delivery feasibility, scope and price historical backfills as line items on dataset sales, then execute the commitments end-to-end across engineering, customer stakeholders, and other RedSail product areas alongside our VP.
- **Regulatory readiness & data governance:** HIPAA compliance, Expert Determination coordination with third-party evaluators, proof-of-delivery audit trails, and provenance documentation for customer legal reviews.

Director, Full Stack Development | Nimble Solutions

Aug 2021 – Feb 2025

Reporting to the CIO, led three functional engineering teams (software, data, and RPA) across US and offshore, through the company's inorganic growth phase.

- **Technical partner to the CIO on four healthcare acquisitions.** Supported technical due diligence, TCO analysis, integration sequencing, and stack rationalization; traveled to Hyderabad to fold the acquired team into US operations.
- **Designed and shipped an AR reimbursement work queue**, revenue-ordered and backed by historical AR aging, lifting rep throughput to **30+ claims/day per rep**.
- **Integrated 20+ practice management systems into a unified data warehouse** via RPA-based extraction and API ingestion. These patterns made post-acquisition system consolidation economically feasible instead of a rebuild-per-acquisition drag on margin.
- Partnered with CIO, VP of Infrastructure, and CISO on technical strategy, vendor evaluations, and annual capex/opex planning; established CI/CD (**60% deployment-time reduction**) and **90%+ test coverage** across US and offshore teams.

Senior Full Stack Developer | Core & Main

Jun 2017 – Aug 2021

- Developed enterprise data applications using C#/.NET and SQL, supporting **200+ concurrent** corporate users across operations.

EDUCATION

Bachelor of Science, Computer Science

University of Phoenix
